) after a few minutes I get an screen message "could not display thumbnails for this album" I have tried unrar and ffdshow and both give the same results, any ideas what this might be about? I am an anwerigant. So where do i go from here. It is interesting as the VST plugins don't seem to work. or am I doing something wrong. I have loaded the vst plugins in "indaba". But what next? I don't get an anything when I go to "File>Plugin Manager".Q: How to redirect to a model and then render another model?

A user submits a survey form and the server, on receiving the form, saves the information to the database. After the server updates the database the user is redirected back to the 'previously-viewed-survey' page. This page then contains the survey which was saved on the server. I'd like to redirect back to the previously viewed survey and have it render on the page. I know how to redirect, but I'm not sure how to redirect to an instance of a model and then render another instance of the same model.

Rails 3.1.3, here are my models: class Survey :member end end Here is my "previously-viewed-survey" action: def previously\_viewed\_survey @survey = Survey.find(params[:survey\_id]) render :partial => "survey", :locals => {:survey => @survey} A: The SurveyResponse object is a subclass of SurveyResponse. When rendering the previously-viewed-survey, you can use the Survey object to find a particular SurveyResponse for that particular Survey. In your instance variables, 82157476af
